

<...> This is the beginning of a code, instead of the dots there will be a the code.

</...> This is the ending of a code.

Example: bold = Example: **BOLD**

 Bold

<u></u> Underline

<i></i> *italic*

<big></big> **big**

<small></small>small

_{sub}

^{sup}

Colors:

 RED = **RED**

 GREEN = **GREEN**

well...I guess you get the point here!

Headers:

<h1>HEADER</h1> **HEADER**

<h2>HEADER</h2> **HEADER**

(Size and color may vary in different themes)

And if you want the text in the center of the page:

<center> This happens when you use "center"</center>:

This happens when you use "center"

Lists

UN numbered lists, first point

 second point

etc. etc.

- Unnumbered list First point
- Second point
- Etc. etc.

```
<UL TYPE="square">
<LI>First point with a square</LI>
<LI>second point</LI>
<LI>Etc. etc.</LI>
</UL>
```

- First point with a square
- Second point
- Etc. etc.

Square can be replaced by:

- Circle
- Disc

If you replace the by it will be counted

```
1
2
3
```

To make a link:

```
<a href="http://thepageyouwantthemtogo.com"> click here </a>
```

If they click on the "click here" they will go to the website (that page will open up in the same window)

If you use this, it will open in a new tab:

```
<a href=http://somepageonline.com" TARGET="_blank"> click here </a>
```
